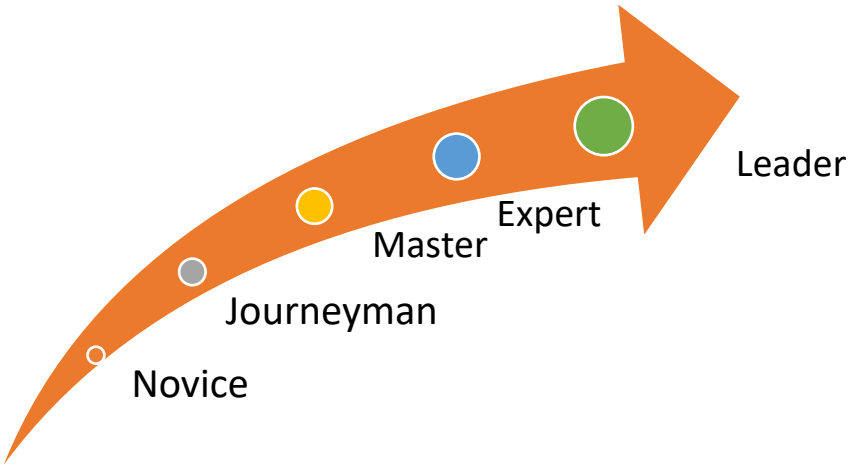
About CyberTec……..……21

CyberTec® recently modified its global training model to focus primarily on **on-demand** asynchronous IT/cybersecurity certification training and skills assessments delivery. Offering a multitude of courses that can meet all customer needs. Our skills training and performance-based assessments provide world-class education & training encompassing the career life cycle from novice to expert.



Globally Recognized courses that are standardized throughout the world and known for quality and excellence, to include meeting the requirements outlined by all 32 cybersecurity specialty areas and 52 work roles as defined by the United States National Cybersecurity Workforce Framework. CyberTec course are designed to certify knowledge, skill, and ability within the following NIST National Cybersecurity Framework domains:

- Identify
- Protect
- Detect
- Respond
- Recover

Training leverages approved industry recognized certification content created through a partnership with uCertify, a global leader in online career and vocational courseware development to create solutions that provide focused hands on learning, pre- and post-assessments, practical labs, quizzes, flash cards, and practice tests through application of experiential learning theory to develop requisite knowledge, skills, and abilities to ensure clients can perform the tasks required of National Initiative for Cybersecurity Education work roles. Curriculum is conveniently offered via ***distance learning (e.g., on-demand)*** and is available 24/7 so individuals can learn at their own pace. This learning modality employs the ideal 21st Century pedagogy.

Certifications ensure the competence of professionals through a measurement of skills and knowledge. Certification exams go beyond training by providing a measurement of comprehension and expertise. Benefits may include:

- Aids in hiring and promotions
- Keep up with evolving technology and dynamic environment associated with the job
- Validates skills, expertise, and proficiency in a certain area
- Develops knowledge and skills in new and emerging subjects
- Facilitates networking with other IT professionals
- For the individual, it lends credibility and advances career

Specialized Skills Assessments are also available through cutting edge tools that few corporations can provide. Understanding the employees' abilities will allow the corporation to target specific training to an individual's or team's weaknesses. Assessments will aide corporations via:

- Reducing potential liability by ensuring correct talent in place
- Strengthening workforce by developing staff and retaining top talent by measuring competencies
- Individual's skills are that tailored to meet position requirements
- Greater organizational compliance

Globally Recognized Certifications are a Business Imperative!

Competency is key to cyber-resilience. All business sectors look for individuals with the capability to perform the tasks required of their functional roles. Certifications are aligned to the knowledge, skills, and abilities required of the cybersecurity profession. Competency may facilitate:

- A reduction in the risk associated with a globally-connect economy
- Meet the skills shortage
- Adherence to industry recognized standards and frameworks
- Offers a competitive global advantage
- Individual adaptability in an evolving threat landscape

DISCLAIMER: *Vendor-approved certification-related instructional materials are provided by uCertify via their contract vehicles with the applicable certification vendors. CyberTec Academy uses uCertify's content in its certification preparation offerings and is not partnered with any specific certification vendors and as such is not responsible for errors or omission in course materials. CyberTec delivers uCertify supplied content to its customers via an online format as such is only responsible for the delivery of the content as provided by uCertify. uCertify provides guarantees on the accuracy and currency of its content. IT/Cybersecurity Novice (Level One) Courses

(CYBR 100) CompTIA IT Fundamentals Certification

The CompTIA IT Fundamentals exam focuses on the knowledge and skills required to identify and explain the basics of computing, IT infrastructure, software development, and database use. ITF+ is the only pre-career certification that helps students or career changers determine if they have a competency for information technology and if it is the right career path for them. ITF+ is the only single certification that covers all areas of IT foundations, creating a broader understanding of IT making it ideal for non-technical professionals. ITF+ establishes an IT education framework for students in middle school and high school.

Coarse Delivery: On-Demand/Self-Paced
Training Level: Fundamental
Course ID: CYBR 100
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 101) CompTIA A+ Certification

CompTIA A+ is a six-day bootcamp. First 5-days is CompTIA A+ 1001 covering PC hardware and peripherals, mobile device hardware, networking and troubleshooting hardware and network connectivity issues. The second 5-days is CompTIA A+ 1002 covering installing and configuring operating systems including Windows, iOS, Android, Apple OS X and Linux. It also addresses security, the fundamentals of cloud computing and operational procedures. CyberTec has extend this course beyond what other certification vendors provide to achieve a higher success rate.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 101
Price: $419 Price
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 102) CompTIA Network+ Certification

CompTIA Network+ certification training covers the configuration, management, and troubleshooting of common wired and wireless network devices. Also included are emerging technologies such as unified communications, mobile, cloud, and virtualization technologies.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 102
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 103) CompTIA Security+ Certification

CompTIA Security+ certification training will certify the successful candidate has the knowledge and skills required to install and configure systems to secure applications, networks, and devices; perform threat analysis and respond with appropriate mitigation techniques; participate in risk mitigation activities; and operate with an awareness of applicable policies, laws, and regulations. The successful candidate will perform these tasks to support the principles of confidentiality, integrity, and availability.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 103
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 104) CompTIA Server+ Certification

Server+ covers server architecture, administration, storage, security, networking, troubleshooting as well as disaster recovery. This course is designed for IT professionals such as PC, desktop, and help desk technicians who have experience supporting PC hardware who wish to make the transition to become server hardware and support specialists. Upon successful completion of this course, you will be able to perform the duties of a server administrator. In this course, you will: 1. Manage server hardware. 2. Install server hardware and operating systems. 3. Configure networking hardware and protocols. 4. Perform basic server configuration tasks. 5. Create a virtual server environment. 6. Administer servers. 7. Implement server storage solutions. 8. Secure the server. - Plan and test disaster recovery. 9. Troubleshoot server issues.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 104
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 105) CompTIA Cloud+ Certification

The new CompTIA Cloud+ certification addresses the increased diversity of knowledge, skills and abilities required of today's systems administrators and systems engineers and validates what is currently necessary to perform effectively on the job. CompTIA Cloud+ covers competency in cloud models, virtualization, infrastructure, security, resource management and business continuity.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 105
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 106) CompTIA Linux+ Certification

The Linux+ certification validates technical competency and provides a broad awareness of Linux operating systems. Those holding the Linux+ certification demonstrate critical knowledge of installation, operation, administration and troubleshooting services. The CompTIA Linux+ [Powered by LPI] certification is a vendor neutral credential. In order to receive CompTIA Linux+ certification, a candidate must pass two exams: LX0-103 and LX0-104. Candidates must pass LX0-103 before taking LX0-104.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 106
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 107) CompTIA Project + Certification

CompTIA Project+ certification is a global credential that validates the knowledge required to effectively manage information technology-related projects throughout the entire project life cycle. CompTIA Project+ is the first IT project management certification designed by IT people for IT people -- because in the IT world, project management is different. Based on best practices of IT project management, as identified by major IT organizations, the exam incorporates IT project management concepts including important soft skills such as conflict resolution, negotiation, communication, team building/leadership and setting and mapping expectations. Individuals with 12 months practical project management experience or those with a strong desire to demonstrate IT project management knowledge should consider earning this certification.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 107
Price: $229
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 108) Certified Internet Webmaster (CIW) Web Security Associate Certification

The CIW Web Security Associate course teaches you how to secure your network from unauthorized activity. This course teaches you about security principles, such as establishing an effective security policy, and about the different types of hacker activities that you are most likely to encounter. Individuals with these security skills can pursue or advance careers in many aspects of online and network security.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 108
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 109) Certified Internet Webmaster (CIW) Site Development Associate Certification

The CIW Site Development Associate course teaches essential Web page development skills. Students learn to develop Web sites using Hypertext Markup Language version 5 (HTML5) and Cascading Style Sheets (CSS). They learn to write code manually, as well as use graphical user interface (GUI) authoring tools. Students also work with images, create hyperlinks, and add tables, forms, video and audio to Web pages. In addition to learning about HTML5 and CSS coding, students learn how to use HTML5 and JavaScript Application Programming Interfaces (APIs) to extend functionality of Web pages, such as geolocation, drag-and-drop, canvas and offline Web applications. Other topics include validating HTML and CSS code, employing search engine optimization (SEO), using style sheets extensively to format Web page content.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 109
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 110) Certified Internet Webmaster (CIW) Database Design Specialist

The CIW Database Design Specialist course provides introductory vendor-neutral training for individuals planning to pursue product-focused database specialization. This course introduces you to DB2, Oracle Database 11g, MS SQL and mySQL. You will also learn about Structured Query Language (SQL) and database optimization through normalization.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 110
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 111) Certified Internet Webmaster (CIW) Internet Business Associate

The CIW Internet Business Associate course prepares students to work effectively in today's business environment. In this course, a student will learn about the tasks involved in various Web Technology job roles, and will learn the skills and technologies to perform them. The career opportunities that demand these common Web-based skills are endless.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 111
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 112) Certified Internet Webmaster (CIW) Network Technology Associate

The Network Technology Associate course prepares students for job readiness in many business and technology-related careers. Understanding the fundamentals of networking, Internet protocols and network security is important for all professionals who use the Internet. This certification proves mastery of the basics of networking and prepares you for further study in a specialty of choice.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 112
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 113) Certified Internet Webmaster (CIW) Social Media Strategist

Social Media Strategist course focuses on the use of social media in business. The course teaches individuals how to create a social media campaign, and how to analyze and present data in order to address organizational issues and make appropriate business decisions. This course teaches the foundations of social media technologies, communication methods and how to engage consumers using various tools. Students will learn how social media is used in a business setting, and how to use social media to boost brand recognition and achieve organizational goals; also, learn how to build social media strategies and tactics, build and manage campaigns, and develop social media content. Students learn about major social media platforms, when and how to utilize each platform correctly in business to achieve organizational goals and strategies. This course teaches how to plan, develop, promote, deliver, present, and analyze social media activities. Students learn about how risks, reputation, crisis response, advertising and promoting are managed and maintained. This course will also teach how metrics, analytics, reporting and social media optimization drive business goals and strategies.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 113
Price: $229
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 114) Microsoft Managing Modern Desktop (MD-100 & MD-101) Complete Bundle Certification

In these course, studentsl learn to plan and implement an operating system deployment strategy. This course will help individuals to understand the various methods available, the scenarios they're suited for, as well as how to deploy Windows using modern methods. This course will also cover planning and implementing an update strategy for Windows. You will be introduced to key components of modern management and co-management strategies. You'll examine what it takes to incorporate Microsoft Intune into your organization and how to use it to manage modern desktops and devices. You'll also learn about methods for deployment and management of apps and browser-based applications. You will also be introduced to the key concepts of security in modern management. This course covers authentication, identities, and access, as well as about how to protect these categories. The student will be introduced to Azure Active Directory and learn how to use Microsoft Intune to protect devices and data with compliance policies. Finally, this course will cover key capabilities of Azure Information Protection and Windows Defender Advanced Threat Protection and how to implement these capabilities.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 108
Price: $539
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 115) Microsoft Office Fundamentals (MS-900) Certification

Microsoft Office 2016 skills are important skills to have in any profession or workplace. Being able to work with Office programs is a must in today's workplace whether you are preparing for an entry-level position or are an experienced professional. The material is presented in a step-by-step manner, and you will learn by completing readings and hands-on exercises, as well as watching video presentations. The course also includes quizzes and exams so you can test your skills at regular intervals throughout the material. Through these methods, you will learn essential introductory and advanced Office skills across Microsoft Office's Word, Excel, PowerPoint, Outlook, and Access programs. Upon completion of this program you will be prepared for the Microsoft Office Specialist Certification exams 77-727 and 77-728 (Excel), 77-725 and 77-726 (Word), 77-729 (PowerPoint), 77-731 (Outlook), and 77-730 (Access). The registration fee for these exams are included with this program.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 115
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 116) Microsoft Office 365 Mobility & Security (MS-101) Certification

Microsoft Office 365 Mobilitiy and Security course covers three central elements of Microsoft 365 enterprise administration – Microsoft 365 security management, Microsoft 365 compliance management, and Microsoft 365 device management. In Microsoft 365 security management, students examine all the common types of threat vectors and data breaches facing organizations today, and learn how Microsoft 365's security solutions address these security threats. Students are introduced to the Microsoft Secure Score, as well as to Azure Active Directory Identity Protection. They learn how to manage the Microsoft 365 security services, including Exchange Online Protection, Advanced Threat Protection, Safe Attachments, and Safe Links. Finally, students will be introduced to the various reports that monitor security health. They will then transition from security services to threat intelligence; specifically, using the Security Dashboard and Advanced Threat Analytics to stay ahead of potential security breaches.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 116
Price: $229
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 117) Microsoft Windows Server (2016) Complete Certification

The Microsoft Certified Solutions Associate (MCSA): Windows Server 2016 certification is designed to prove mastery of the skills required to administer Windows Server 2016, including installation and implementation of storage solutions, Hyper-V, and Windows containers; networking with DNS, DHCP, IP address management, and advanced infrastructure; and administration of Active Directory Domain Services, group policy, Nano Server, and more.. The MCSA: Windows Server 2016 certification is made up of three exams, all of which are covered by this training.

- 70-740: Installation, Storage, and Compute with Windows Server 2016
- 70-741: Networking with Windows Server 2016
- 70-742: Identity with Windows Server 2016

Typically, learners pursuing this certification path should have some familiarity (1-3 years) with Windows Server and experience working in an enterprise environment. The MCSA is considered an novice to intermediate-level certification but has no prerequisite training or certifications.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 117
Price: $829
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 118) MTA: Microsoft Network Fundamentals Certification

MTA Networking Fundamentals is designed to provide students with an explanation and understanding of fundamental networking concepts. This training course prepares students for Microsoft exam 98-366. MTA is a new entry-level credential from Microsoft that validates the foundational knowledge needed to take the first step toward building a successful career in technology. The MTA certification programs cover the baseline knowledge of building and managing Microsoft Windows Servers, Windows-based network operating systems, Active Directory, account management, and system recovery tools. Expert Scott Kennedy guides you through each exam objective seamlessly, all the while preparing you for the Microsoft exam 98-366. This course provides you with interactive videos that meet the needs of multiple styles of learning from auditory to visual. The MTA Networking Fundamentals eLearning course includes a pre test and post test that accurately identifies your skill gap. Kennedy will guide you step by step and help you close your skill gap with content concentrating on each exam objective. Achieving MTA certifications is the first step toward becoming a Microsoft Certified Technology Specialist (MCTS).

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 118
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 119) MTA: Microsoft Security Fundamentals Certification

Microsoft Security Fundamentals tests a student's knowledge of physical security, Internet security, operating system security, network security, and software security. This certification validates that a candidate has fundamental security knowledge and skills. It can serve as a stepping stone to the Microsoft Certified Solutions Associate (MCSA) exams. The MTA is a new, entry-level certification designed to help individuals take the first step toward a career as an IT professional or developer. Also, when students earn an MTA Certification, they become a member of the Microsoft Certified Professional community.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 119
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 120) Microsoft Azure Fundamentals Certification

Microsoft Azure Fundamentals students will gain the foundational level knowledge on cloud concepts; core Azure services; security, privacy, compliance, and trust; and Azure pricing and support. Students who complete this program will earn the official, industry-recognized Microsoft Azure Fundamentals certification. This training program covers:

- Cloud Concepts: Students will learn about cloud services, the types of cloud models, and the types of cloud services.
- Core Azure Services: Students learn about Azure core cloud architectural components, Azure services and products, Azure solutions, and Azure management tools.
- Security, Privacy, Compliance, and Trust: You learn about Azure security, identity, governance, monitoring, reporting, and standards.
- Azure Pricing, Service Level Agreements (SLAs), and Lifecycle: Students will learn about Azure subscriptions, planning and managing costs, support options, SLAs, and service lifecycles.

Course Delivery: On-Demand/Self-Paced
Training Level: One
Course ID: CYBR 120
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

IT/Cybersecurity Journeyman (Level Two) Courses

(CYBR 201) CompTIA Cybersecurity Analyst (CSA+) Certification

The Cybersecurity Analyst (CSA+) certification is a vendor-neutral IT professional certification that validates knowledge and skills required to configure and use threat detection tools, perform data analysis, interpreting the results to identify vulnerabilities, threats and risk to an organization with the end goal of securing and protecting applications and systems within an organization. The CSA+ certification applies behavioral analytics to the IT security market to improve the overall state of IT security. Analytics have been successfully integrated in the business intelligence, retail and financial services industries for decades. Analytics are now applied to IT security. Cybersecurity analytics greatly improves threat visibility across a broad attack surface by focusing on network behavior, including an organization's interior network. Threats are better detected using analytics. CSA+ is a vendor-neutral IT professional certification and the recommended first professional-level certification for IT security-analyst professionals. The performance-based CSA+ exam will include hands-on simulations. These simulations require test-takers to perform security analyst job tasks during the exam. To prepare for these performance-based assessments, trainers, educators and publishers should emphasize open-source analytics tools and teamwork. Use net wars or cyberwarfare scenarios with red teams as pen testers, white teams as security analysts, and blue teams as incident responders.

Course Delivery: On-Demand/Self-Paced
Training Level: Two
Course ID: CYBR 201
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 202) CompTIA PenTest + Certification

CompTIA's PenTest+ training teaches students to plan and scope an assessment, understand legal and compliance requirements, perform vulnerability scanning and penetration testing, analyze data, and effectively communicate results. The course introduces some general concepts and methodologies related to pen testing, allowing students to work through a simulated pen test for a fictitious company. Upon successful completion of this course, students will learn to plan, conduct, analyze, and report on penetration tests, including the ability to:

- Plan and scope penetration tests
- Conduct passive reconnaissance
- Perform non-technical tests to gather information
- Conductive active reconnaissance
- Analyze vulnerabilities
- Penetrate networks
- Exploit host-based vulnerabilities
- Test applications Complete post-exploit tasks
- Analyze and report pen test results

Course Delivery: On-Demand/Self-Paced
Training Level: Two
Course ID: CYBR 202
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 203) EC-Council Certified Ethical Hacker (CEH) Certification

The Certified Ethical Hacker (CEH) Certification Course certifies individuals in the specific network security discipline of Ethical Hacking from a vendor-neutral perspective. CEH certification will fortify the application knowledge of security officers, auditors, security professionals, site administrators, and anyone who is concerned about the integrity of the network infrastructure. A CEH is a skilled professional who understands and knows how to look for the weaknesses and vulnerabilities in target systems and uses the same knowledge and tools as a malicious hacker.

Course Delivery: On-Demand/Self-Paced
Training Level: Two
Course ID: CYBR 202
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

CISCO Certified Network Associate (CCNA)

(CYBR 204) CCNA Routing and Switching Certification

ICND1(100-105): Interconnecting Cisco Network Devices Part 1

This 40-hour course focuses on providing the skills and knowledge necessary to install, operate, and troubleshoot a small branch office Enterprise network, including configuring a switch, a router, and connecting to a WAN and implementing network security. A Student should be able to complete configuration and implementation of a small branch office network under supervision.

ICND2 (200-105): Interconnecting Cisco Network Devices Part 2

This 40-hour course focuses on providing the skills and knowledge necessary to install, operate, and troubleshoot a small to medium-size branch office Enterprise network, including configuring several switches and routers, connecting to a WAN and implementing network security. ICND 1 is a prerequisite.

Course Delivery: On-Demand/Self-Paced
Training Level: Two
Course ID: CYBR 204
Price: $469
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 205) Red Hat Certified Systems Administrator

A Red Hat Certified System Administrator certification is earned when an IT professional demonstrates the core system-administration skills required in Red Hat Enterprise Linux environments. A Red Hat Certified System Administrator is able to perform the following tasks: 1) Understand and use essential tools for handling files, directories, command-line environments and documentation. 2) Operate running systems, including booting into different run levels, identifying processes, starting and stopping virtual machines and controlling services. 3) Configure local storage using partitions and logical volumes. 4) Create and configure file systems and file system attributes, such as permissions, encryption, access control lists and network file systems. 5) Deploy, configure, and maintain systems, including software installation, update and core services. 6) Manage users and groups, including use of a centralized directory for authentication. 7) Manage security, including basic firewall and SELinux configuration

Course Delivery: On-Demand/Self-Paced

Training Level: Two
Course ID: CYBR 205
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 206) AWS Certified SysOps Administrator - Associate Certification

Systems Operations on AWS training is designed to teach those in a Systems Administrator or Developer Operations (DevOps) role how to create automatable and repeatable deployments of networks and systems on the AWS platform. The course covers the specific AWS features and tools related to configuration and deployment, as well as common techniques used throughout the industry for configuring and deploying systems. Course Objectives include:

- Use standard AWS infrastructure features such as Amazon Virtual Private Cloud (VPC), Amazon Elastic Compute Cloud (EC2), Elastic Load Balancing, and Auto Scaling from the command line
- Use AWS CloudFormation and other automation technologies to produce stacks of AWS resources that can be deployed in an automated, repeatable fashion
- Build functioning virtual private networks with Amazon VPC from the ground up using the AWS Management Console
- Deploy Amazon EC2 instances using command line calls and troubleshoot the most common problems with instances
- Monitor the health of Amazon EC2 instances and other AWS services
- Manage user identity, AWS permissions, and security in the cloud
- Manage resource consumption in an AWS account using tools such as Amazon CloudWatch, tagging, and Trusted Advisor
- Select and implement the best strategy for creating reusable Amazon EC2 instances
- Configure a set of Amazons EC2 instances that launch behind a load balancer, with the system scaling up and down in response to demand
- Edit and troubleshoot a basic AWS CloudFormation stack definition

Course Delivery: On-Demand/Self-Paced
Training Level: Two
Course ID: CYBR 206
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 207) AWS Certified Advanced Networking - Specialty Certification

The AWS Certified Advanced Networking – Specialty (ANS-C00) examination is intended for individuals who perform complex networking tasks. This examination validates advanced technical skills and experience in designing and implementing AWS and hybrid IT network architectures at scale. It validates an examinee's ability to:

- Design, develop, and deploy cloud-based solutions using AWS.
- Implement core AWS services according to basic architectural best practices.
- Design and maintain network architecture for all AWS services.
- Leverage tools to automate AWS networking tasks

Course Delivery: On-Demand/Self-Paced
Training Level: Two
Course ID: CYBR 207
Price: $229
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 208) ITIL 4 Foundations Certification

The ITIL 4 Foundation certification is designed as an introduction to ITIL 4 and enables candidates to look at IT service management through an end-to-end operating model for the creation, delivery and continual improvement of tech-enabled products and services. ITIL 4 Foundation candidates will understand the following:

- A holistic approach to the facilitation of co-creation of value with customers and other stakeholders in the form of products and services
- The guiding principles of ITIL 4
- The four dimensions of Service Management
- Key concepts from Lean, Agile, DevOps, and why these are important to deliver business value
- How ITIL practices described in ITIL 4 will maintain the value and importance provided by the current ITIL processes, whilst at the same time expand to be integrated to different areas of service management and IT, from demand to value.

Course Delivery: On-Demand/Self-Paced
Training Level: Two
Course ID: CYBR 208
Price: $229
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 209) CertNexus Certified Internet of Things Practitioner (CIoPT) Certification

In this course, studentsl learn general strategies for planning, designing, developing, implementing, and maintaining an IoT system through various case studies and by assembling and configuring an IoT device to work in a sensor network. Students will create an IoT device based on an ESP8266 microcontroller, implementing various common IoT features, such as analog and digital sensors, a web-based interface, MQTT messaging, and data encryption.

Course Delivery: On-Demand/Self-Paced
Training Level: Two
Course ID: CYBR 209
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 210) CertNexus Certified Artificial Intelligence Practitioner (CAIP) Certification

Artificial intelligence (AI) and machine learning (ML) have become an essential part of the toolset for many organizations. When used effectively, these tools provide actionable insights that drive critical decisions and enable organizations to create exciting, new, and innovative products and services. This course empowers a student to apply various approaches and algorithms to solve business problems through AI and ML, follow a methodical workflow to develop sound solutions, and use open source, off-the-shelf tools to develop, test, and deploy those solutions, and ensure that they protect the privacy of users.

Course Delivery: On-Demand/Self-Paced
Training Level: Two
Course ID: CYBR 210
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 211) CertNexus Secure Coder (CCSC) Certification

CCSC is the comprehensive certification for validating secure coding practices - for all developers, in all programming languages, on all platforms. It leverages many of the OWASP Top Ten best practices, is designed to validate the knowledge and skills required to design and develop protected applications. This includes better understanding vulnerabilities that undermine security, general strategy for dealing with security defects and misconfiguration, and how to incorporate security into all phases of development. It is designed to certify that the successful candidate has the knowledge, skills, and abilities to design and develop a variety of applications for various platforms, analyze security concerns outside of specific languages and platforms, use a number of testing and analysis tools, and mitigate against common threats to data and systems.

Course Delivery: On-Demand/Self-Paced
Training Level: Two
Course ID: CYBR 211
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 212) CertNexus CyberSec First Responder (CFR) Certification

CYBERSEC First Responder® is the "blue team" certification for cybersecurity. It certifies that the successful candidate has the knowledge, skills, and abilities required to deal with a changing threat landscape and will be able to assess risk and vulnerabilities, acquire data, perform analysis, continuously communicate, determine scope, recommend remediation actions, and accurately report results. is a comprehensive certification. It is designed to validate the knowledge to effectively identify, respond to, protect against, and remediate malicious activities involving information systems. Additionally, certifies that the successful candidate has the foundational knowledge to deal with a changing threat landscape and will be able to assess risk and vulnerabilities, acquire data, perform analysis, continuously communicate, determine scope, recommend remediation actions, and accurately report results.

Course Delivery: On-Demand/Self-Paced
Training Level: Two
Course ID: CYBR 212
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 213) Microsoft Azure Administrator Certification

Azure Administrator training provide students with knowledge related to implementing, monitoring, and maintaining Microsoft Azure solutions, including major services related to compute, storage, network, and security. This training teaches students to:

- Manage Azure identities and governance
- Implement and manage storage
- Deploy and manage Azure compute resources
- Configure and manage virtual networking
- Monitor and back up Azure resources

Course Delivery: On-Demand/Self-Paced
Training Level: Two
Course ID: CYBR 213
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.)

(CYBR 214) NIST Cyber Security Professional—Foundations

This APMG accredited one day instructor-live remote training program is targeted at IT and Cybersecurity professionals looking to become certified on how to operationalize the NIST Cybersecurity Framework (NCSP) across an enterprise and its supply chain. The NCSP Foundation training course outlines current cybersecurity challenges and explains how organizations who implement a NCSP program can mitigate these challenges. This course introduces the NIST Cybersecurity Framework (NIST CSF). The Framework is a risk-based approach to managing cybersecurity risk and is composed of three parts: Framework Core, Framework Implementation Tiers, and Framework Profiles. Each Framework component reinforces the connection between business drivers and cybersecurity activities. This course discusses how an organization can use the Framework as a key part of its systematic process for identifying, assessing, and managing cybersecurity risk. The Framework is not designed to replace existing processes; an organization can use its current process and overlay it onto the Framework to determine gaps in its current cybersecurity risk approach and develop a roadmap to improvement. Utilizing the Framework as a cybersecurity risk management tool, an organization can determine activities that are most important to critical service delivery and prioritize expenditures to maximize the impact of the investment. Course is organized as follows:

- Doing Business in the Danger Zone – discusses the current state of cybersecurity in the context of today's threat landscape
- Risk-based Approach – Risk management is the ongoing process of identifying, assessing, and responding to risk. To manage risk, organizations should understand the likelihood that an event will occur and the resulting impact to express this as their risk tolerance.
- The NIST Cybersecurity Framework Fundamentals – The Framework is a risk-based approach to managing cybersecurity risk and is composed of three parts: the Framework Core, the Framework Implementation Tiers, and the Framework Profiles.
- Cybersecurity Controls Factory™ Model – operationalizes of the 20 Critical Security Controls within the NIST CSF.
- Providing a 7-step approach for the implementation and improvement of their cybersecurity posture utilizing the NIST CSF.

CTA Staff
Course Delivery: On-Demand/Self-Paced
Training Level: Two
Course ID: CYBR 214
Price: $690 (includes e-book, exam prep, certification voucher)

IT/Cybersecurity Master (Level Three) Courses

(CYBR 301) CompTIA Advanced Security Practitioner (CASP) Certification

This course will prepare the successful candidate with the technical knowledge and skills required to conceptualize, design, and engineer secure solutions across complex enterprise environments. The candidate will apply critical thinking and judgment across a broad spectrum of security disciplines to propose and implement solutions that map to enterprise drivers.

Course Delivery: On-Demand/Self-Paced
Training Level: Three
Course ID: CYBR 301
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 302) EC-Council Computer Hacking Forensic Investigator (CHFI) Certification

During our 5-day EC-Council CHFI Certification Training Camp, students will live, learn, and take the exams at one of our state-of-the- art education centers. This blended-learning course employs outcome-based delivery that focuses on preparing you with the real- world skills required to pass the certification exam.

Course Delivery: On-Demand/Self-Paced
Training Level: Three
Course ID: CYBR 302
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 303) ISC² Systems Security Certified Practitioner (SSCP) Certification

The Systems Security Certified Practitioner (SSCP) is the ideal certification for those with proven technical skills and practical, hands-on security knowledge in operational IT roles. It provides confirmation of a practitioner's ability to implement, monitor and administer IT infrastructure in accordance with information security policies and procedures that ensure data confidentiality, integrity and availability. The SSCP shows you have the technical skills to implement, monitor and administer IT infrastructure using information security policies and procedures. You're skilled in protecting the confidentiality, integrity and availability of data. The broad spectrum of topics included in the SSCP Common Body of Knowledge (CBK) ensure its relevancy across all disciplines in the field of information security. Successful candidates are competent in the following 7 CBK Domains:

- Access Controls
- Security Operations and Administration
- Risk Identification, Monitoring, and Analysis
- Incident Response and Recovery
- Cryptography
- Network and Communications Security
- Systems and Application Security

Course Delivery: On-Demand/Self-Paced
Training Level: Four
Course ID: CYBR 303
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 304) HRCI PHR/SPHR Professional in Human Resources Certification

Professional in Human Resources Certification (PHR/SPHR) course. This HR training course covers the PHR and SPHR exam objectives and provides you with the knowledge and skills required to work with business management, employee, and labor relations; learning and development; talent planning, and acquisition. HRCI PHR (Professional in Human Resources) certification validates the abilities of professionals to administer, develop, implement, and evaluate programs, procedures, and policies to provide a safe and secure working environment; and protect an organization from potential liability. The HRCI SPHR (Senior Professional in Human Resources) certification is a globally recognized, expert-level credential designed to help HR professionals develop and utilize business metrics to measure the achievement of strategic goals and objectives of the organization.

Course Delivery: On-Demand/Self-Paced
Training Level: Three
Course ID: CYBR 304
Price: $229
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 305) NIST Cyber Security Professional Foundations/Practitioner Certification

This APMG accredited training program is targeted at IT and Cybersecurity professionals looking to become certified on how to operationalize the NIST Cybersecurity Framework (NCSF) across an enterprise and its supply chain. The NCSP Bootcamp program teaches the knowledge to prepare for the NSCP Boot Camp exam (Foundation + Practitioner) plus the skills and abilities to design, build, test, manage and improve a cybersecurity program based on the NCSF. It includes the following:

- **Develop** a program to rapidly operationalize the NISTCSF controls and management systems
- **Engineer** a solution that will span the enterprise and its supply chain
- **Build and Operate** a Security Operations Center (SOC)
- **Implement** solutions that will automate the risk assessment, threat update reporting process
- **Establish** a continuous learning program for all Technical and Business employees

Course Delivery: On-Demand/Self-Paced
Training Level: Three
Course ID: CYBR 305
Price: $1789 (includes e-book, exam prep, certification exam voucher)

IT/Cybersecurity Expert/Manager (Level Four) Courses

(CYBR 401) ISC² Certified Information Systems Security Professional (CISSP) Certification

A CISSP is an information assurance professional who defines the architecture, design, management and/or controls that assure the security of business environments. The vast breadth of knowledge and the experience it takes to pass the exam is what sets the CISSP apart. The credential demonstrates a globally recognized standard of competence provided by the (ISC)²® CBK which covers critical topics in security today, including cloud computing, mobile security, application development security, risk management and more. The CISSP was the first credential in the field of information security to meet the stringent requirements of ISO/IEC Standard 17024. CISSP certification is not only an objective measure of excellence but is also a globally recognized standard of achievement.

Course Delivery: On-Demand/Self-Paced
Training Level: Four
Course ID: CYBR 401
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 402) ISC² Certified Cloud Security Professional (CCSP) Certification

As powerful as cloud computing is for the organization, understanding its information security risks and mitigation strategies is critical. Legacy approaches are inadequate, and organizations need competent, experienced professionals equipped with the right cloud security knowledge and skills to be successful. They need CCSPs. Backed by the two leading non-profits focused on cloud and information security, the Cloud Security Alliance (CSA) and (ISC)², the CCSP credential denotes professionals with deep-seated knowledge and competency derived from hands-on experience with information security and cloud computing. CCSPs professionals have achieved the highest standard for cloud security expertise and enable any organization to benefit from the power of cloud computing while keeping sensitive data secure.

Course Delivery: On-Demand/Self-Paced
Training Level: Four
Course ID: CYBR 402
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 403) CSSLP - Certified Secure Software Lifecycle Professional Certification

The CSSLP Education Program is the exclusive way to learn security best practices and industry standards for the software lifecycle - critical information to a CSSLP. With our CSSLP training course students become prepared to take this premier secure software development certification. This course provides you with in-depth coverage on the skills and concepts on the eight domains of software security. This includes Software Concepts, Requirements, Design, Implementation, Testing, Lifecycle Management among others. This CSSLP course is for Software Developers, Engineers, Architects, Penetration Testers and other IT professionals who have a minimum of four years' experience in full-time Software Development Lifecycle (SDLC) in one or more of the eight domains covered in the CSSLP exam.

Course Delivery: On-Demand/Self-Paced
Training Level: Four
Course ID: CYBR 403
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 404) ISACA Certified Information Security Manager (CISM) Certification

This 5-day ISACA Certified Information Security Manager (CISM) training course equips information security professionals with the knowledge and technical skills required for proficiency in building and managing enterprise information security. This exam benchmarks the understanding of essential concepts in many Information Security job practice areas. With the help of prominent industry leaders, subject matter experts and industry practitioners, ISACA has put together this exam to define what security managers do and what they need to know. The DoD's IA professionals are classified into two categories-information: assurance, technical (IAT), and information assurance managerial (IAM)-that are each divided into three levels. CISM is an approved certification for professionals in IAM Levels II and III.

Course Delivery: On-Demand/Self-Paced
Training Level: Four
Course ID: CYBR 404
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 405) ISACA Certified Information Systems Auditor (CISA) Certification

This 5-day ISACA Certified Information Systems Auditor (CISA) Boot Camp equips information professionals with the knowledge and technical skills required for proficiency in IS audit, control, monitoring, and assessing. The CISA designation is a globally recognized certification for IS audit control, assurance, and security professionals. CISA-certified individuals demonstrate that they have audit experience, skills, and knowledge. They are also capable of managing vulnerabilities, ensuring compliance, and instituting controls within the enterprise.

Course Delivery: On-Demand/Self-Paced
Training Level: Four
Course ID: CYBR 405
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 406) AxeLos Prince2 Agile Project Management

PRINCE2 Agile® is the world's most complete project management solution, combining the flexibility and responsiveness of agile with the clearly defined framework of PRINCE2®. The new best practice guidance shows how this compatibility can be exploited by organisations harnessing both PRINCE2 and agile, equipping them with the required skills and processes to successfully deliver projects to meet customer requirements in today's fast paced and rapidly changing business environments:

- The combination of control and flexibility
- Clear project definitions
- Seamless integration
- Improved capability to react and adapt

PRINCE2 Agile Foundation is a newly developed certification level to support PRINCE2 Agile. In 2015, PRINCE2 Agile initially launched with a Practitioner level certification and this new Foundation level will build upon that success by opening PRINCE2 Agile out to project managers outside of the existing PRINCE2 community. The development of the new certification level will not impact the existing prerequisites for PRINCE2 Agile Practitioner, it will add one more route for candidates.

Course Delivery: On-Demand/Self-Paced
Training Level: Four
Course ID: CYBR 406
Price: $229
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 409) Project Management Institute (PMI) Program Management Professional (PgMP)

The Program Management Professional (PgMP)® credential from Project Management Institute (PMI)® is the next step after Project Management Professional (PMP)® Certification and addresses the community of professionals who are responsible for the coordinated management of multiple projects that are in alignment with organizational objectives. They are required to direct and manage complex activities that may span functions, organizations, cultures, and geographies. The on-demand course covers the Project Management process from beginning to end, honing your skills in the six prime focus areas: Governance, Prioritization, Escalation, Resource Management, Benefits Realization, and Stakeholder Management. As a PgMP® credential holder, you will be able to promote better integration and coordination of multiple projects for the overall benefit of the program.

Course Delivery: On-Demand/Self-Paced
Training Level: Four
Course ID: CYBR 409
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 409) Project Management Institute (PMI) Project Management Professional (PMP)

The PMP certification is the global gold standard for project management professionals. Keep abreast of the changes in the project management practices updated in PMBOK guide - 6th edition and pass the PMP® exam. The course covers new trends, emerging practices, tailoring considerations, and places a greater emphasis on strategic and business knowledge. It also includes a new section on the role of the project manager. The PMP® certification greatly expands your skills value and potential job opportunities. Recognized globally, a PMP® can help you land lucrative roles in IT, manufacturing, finance, healthcare, and other exciting industries. Certified PMP®'s also report better project performance and steep pay raises.

Course Delivery: On-Demand/Self-Paced
Training Level: Four
Course ID: CYBR 409
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

(CYBR 410) Project Management Institute (PMI) Risk Management Professional (RMP)

Project risk management professionals perform a specialized function attuned to the needs of a project environment that is increasingly global, dynamic, and complex. The PMI Risk Management Professional (PMI-RMP) ® certification demonstrates an individual's ability to identify and assess project risks, and to develop risk responses that mitigate project threats and capitalize on opportunities.

Course Delivery: On-Demand/Self-Paced
Training Level: Four
Course ID: CYBR 410
Price: $279
Product includes e-book, labs, videos, exam prep materials (quizzes, practice tests, flash cards, etc.).

IT/Cybersecurity Skills Assessments

(CYBR 601) CYBRSCORE System Administrator Assessment (Level One) (4 hours)

System Administrator skills assessment is designed to assess the knowledge, skills and abilities required by the System Administration specialty area as defined by the NICE Cybersecurity Workforce Framework. Individuals in this role should have a comprehensive understanding of installing, configuring, troubleshooting, and maintaining server configurations (hardware and software) to ensure their confidentiality, integrity, and availability. They should also be able to manage accounts, firewalls, and patches, and be responsible for access control, passwords, and account creation and administration. This assessment targets CK/TRC Level One clients currently in or candidates for the following roles:

- LAN Administrator
- Platform Specialist
- Security Administrator
- Server Administrator
- Systems Operations Personnel
- Systems Administrator
- Website Administrator

CTA Staff
Assessment Delivery: Online | (meets 1X) |
Training Level: One
Course ID: CYBR 601
Price: $595 (includes assessment voucher)

(CYBR 602) CYBRSCORE Defense Analyst Assessment (Level Two/Three) (2-3 hours each)

Cyber Defense Analyst is designed to assess an individual's knowledge, skills and abilities related to using data collected from cyber defense tools (e.g., IDS alerts, firewalls, network traffic logs) to analyze events that occur within their environments for mitigating threats. Cyber Defense Analysts are assessed in five specific areas:

1. **Protocol Analysis (CYBR 602-1)**: Evaluates an individual's ability to use a network protocol analyzer to examine network traffic, discover malicious activity, and report their findings. *OS/Tools used: Security Onion / Wireshark, tcpdump.*
2. **Intrusion Detection (CYBR 602-2): E**valuates an individual's ability to monitor events that occurred on a computer network and to review and interpret captured traffic for signs of incidents that could be considered an imminent threat or violation of security policies, standard security practices, or acceptable use policies. OS/Tools used: *Security Onion / Wireshark, Snort.*
3. **Incident Handling Methodology (CYBR 602-3)**: Evaluates an individual's ability to gather information on an incident, to understand the importance of following industry standard reporting techniques, to comprehend commonly utilized attack types, and to perform analysis and response tasks for a sample incident. *OS/Tools used: Security Onion, Windows / Wireshark, Microsoft Baseline Security Analyzer.*
4. **Network Defense Analysis (CYBR 602-4)**: Evaluates an individual's ability to define, identify, and classify weaknesses or vulnerabilities that exist in a system or networked environment. *OS/Tools used: Kali Linux / network scanners.*
5. **Network Attack Analysis (CYBR 602-5)**: Evaluates an individual's ability to exploit previously identified weaknesses or vulnerabilities on a system or network environment. *OS/Tools used: Kali Linux / Metasploit, network scanners.*

This assessments targets CK/TRC Level Two/Three clients currently in or candidates for the following roles:

- CND Analyst (Cryptologic)
- Cyber Security Intelligence Analyst
- Focused Operations Analyst
- Incident Analyst
- Network Defense Technician
- Network Security Engineer
- Security Analyst
- Security Operator
- Sensor Analyst

CTA Staff
Assessment Delivery: Online | (meets up to 1X) |
Training Level: Two & Three
Course ID: CYBR 602
Price: $295 each or $1195 for all five (includes assessment voucher(s)

(CYBR 603) CYBRSCORE Vulnerability and Management Assessment (Level Three/Four) (4 hours)

Vulnerability and Management assessment is designed to assess the knowledge, skills and abilities required by the Vulnerability and Management specialty areas as defined by the NICE Cybersecurity Workforce Framework. Individuals in this role should have a comprehensive understanding of the tools and techniques to detect and exploit security vulnerabilities in web-based applications, networks, and computer systems that use the Windows and Linux OS, as well as recommend mitigation countermeasures.

This assessments targets CK/TRC Level Three and Four clients currently in or candidates for the following roles:

- Blue Team Technician
- Certified TEMPEST Professionals/Technicians
- Close Access Technician
- CND Auditor/Compliance Manager
- Ethical Hacker
- Governance Manager
- Information Security Engineer
- Internal Enterprise Audit
- Penetration Tester
- Red Team Technician
- Reverse Engineer
- Risk/Vulnerability Analyst
- Technical Surveillance Countermeasures Technician
- Vulnerability Assessment Analyst/Manager

CTA Staff
Assessment Delivery: Online | (meets 1X) |
Training Level: Two & Three
Course ID: CYBR 603
Price: $595 (includes assessment voucher)

About CyberTec

ABOUT CYBERTEC ACADEMY®: CyberTec Academy is a full-service on-demand IT/Cyber training and certification preparation organization, it is a division of Titan Rain Cybersecurity, LLC. CyberTec delivers the world's first fully-on-demand experiential-based, certification-driven cybersecurity training and workforce development program and interactive general awareness training program. CyberTec's mission is to provide IT/Cyber education and training programs that addresses cyber general knowledge to employees and ensures individuals and teams gain the requisite knowledge, skills, and abilities to perform the requisite tasks require of their roles and responsibilities within any organization—*CyberTec certifies competency*. Programs combine interactive experiential-based training employing uCertify content designed by the global certification bodies augmented by hands-on skills labs and skills assessments to ensure student ability to meet employer demand. Training is delivery has transitioned to a 24/7 on-demand modality to meet the demand of the 21st Century employers and individuals via dynamic learning management system. CyberTec is part of a joint venture with The Global McDuffie Group.

ABOUT TITAN RAIN CYBERSECURITY (TRC), LLC: TRC is a cutting-edge information technology and cybersecurity consulting company. TRC's IT/Cybersecurity consulting services include chief information security officer services, assessments, risk, governance, policy, compliance, infrastructure, global standards/best practices, and management advisory. TRC leads the globe in providing "Big 3" cyber consulting quality at a fiscally responsible price. TRC's unique approach to client-first consulting service ensure organizations get best-in-value solutions to address current and future needs related to organizational cyber resiliency. TRC experienced solution provider across the healthcare, transportation, defense, information technology, energy, communications, chemical, financial, manufacturing, agriculture, federal/state/local government, emergency services, water, real estate, and academic sectors.

ABOUT THE GLOBAL MCDUFFIE GROUP, LLC: The Global McDuffie Group (TGMG), a global leader in cybersecurity education, training, and workforce development consulting. TGMG provides excellent comprehensive consulting services focused on cybersecurity as it relates to education, training, workforce development, policy, and standards. The Group's leadership represents over four decades of technical education/training and operational experience from across industry, academia, government, and the military. A broad set of computer science topics can be addressed from an advisory or assessment perspective. Combined with an association of talented individuals and organizations the Group is more than capable of world class comprehensive analysis leading to potential solutions for highly complex computationally based problems, cybersecurity related and otherwise, facing business and governmental organizations globally.
